

**PLEASE READ THOROUGHLY, VEGETATION  
MAINTENANCE PROCEDURES HAVE CHANGED!**

**NOTICE OF TREE TRIMMING AS PART OF VEGETATION MANGEMENT WORK  
ON PSE&G EASEMENT**

Date: February 13, 2016

Dear Property Owner,

Public Service Electric and Gas Company (PSE&G) utilizes the electric transmission right-of-way located on your property. The electric transmission lines on this right-of-way are essential for PSE&G to meet its commitment to provide safe, proper and adequate electric service to consumers throughout New Jersey. Maintaining proper tree clearance from the power lines is absolutely necessary to assure:

- The continued safety of homeowners living near the transmission lines,
- The safety of PSE&G employees and contractors working on the power lines, and
- The reliability of the electric utility system.

The number and size of overgrown trees and other vegetation on the right-of-way now requires maintenance of the right-of-way. As such, Davey Tree Expert Co., Inc., a private contractor working for PSE&G, will **REMOVE ALL TREES** that have the ability to mature over 3 feet in height in the wire zone (land located directly under the widest portion of the transmission line conductors). Vegetation in the wire zone will be managed to promote grasses and a low-growing plant community to obtain a meadow effect where possible. In the border zone (land from the edge of the transmission line wire zone to the outer boundary of the right of way), where clearance permits, PSE&G **may** allow compatible vegetation, which should generally not exceed 15 feet at maturity. PSE&G will also **SIDE TRIM** all tree branches originating from outside the Right-of-Way that hang over or cross onto PSE&G's transmission right-of-way. The resulting debris from this activity, brush and wood, will be removed unless otherwise requested by property owner prior to start of work. This work should begin, weather permitting, on or about Feb. 22nd and should be completed in approximately 45 days.

If you have any questions or concerns, please telephone Jason Compher, Davey Tree Expert Co., at (609) 273-4017 during the day. Or, you may contact PSE&G's Transmission Vegetation Management Department at 732-289-5292.

Thank you for your understanding,

Richard Arnold

Vegetation Manager - Transmission
